

“Just fiby it”

Mezzanine Floor

Main Beam

"Fiby" is offering a custom-designed mezzanine structure with a high loading capacity and an easy-to-assemble/de-assemble design. The unique feature here is the **Specialised Main Beam** that enhances strength while eliminating the need for bolting, which could simplify installation and disassembly. Here are a few points you might want to consider or emphasise when presenting this solution :

- 1. High Loading Capacity :** The 800kg per square meter capacity is impressive and suitable for heavy-duty storage or operational uses.
- 2. Specialised Main Beam :** This could be a key differentiator for Fiby. By offering increased strength and a bolt-free design, it might reduce installation time and complexity, as well as the need for specialised tools or personnel.
- 3. Versatility and Flexibility :** The ability to easily assemble and disassemble the structure could be appealing for businesses that might need to reconfigure their space over time or relocate the mezzanine system.

Connector Beam

- Connector Beam will provide you Higher / Lower loading capacity with increasing qty of connector beam.
- Its very easy to assembled / de-assembled.
- Easy to Install & Remove.
