UNILUX

One brand. One promise.

Modern wooden windows only share a name with their „ancestors“. Good carpentry and appearance alone is no longer enough, because energy efficiency, safety and functionality standards have increased dramatically to meet today's customer needs.

That's why all UNILUX Meister windows are development projects that demonstrate intelligence and complex engineering.

To be able to provide access to these masterpieces to more than just a select few customers UNILUX mass-produces them. That means it's possible for us to offer these unique wood products at a price that makes top quality affordable.

Where quality is at home – UNILUX

All good things come in sixes:

The UNILUX brand advantages

Brand advantage 1: Durability

Since we were founded, UNILUX has always used the highest-quality materials. Down to the finest detail: UNILUX wood products rely on high-quality coatings with UV blockers. The high-quality production and strict quality control guarantee that you will enjoy your UNILUX product for years.

Brand advantage 2: Freedom of design

Some things are a matter of taste. You can choose from three design variants (slanted, round, rustic), three refined woods (pine, larch, eukalyptus grandis), 189 colors and glazing tones, and several double-glazed and triple-glazed options. And let's not forget: a wide variety of window shapes (they don't have to be rectangular, after all) and sash bars upon request in four different lines. Variety right from the factory.

Brand advantage 3: Energy efficiency

UNILUX's solid construction style not only guarantees durability, but also helps save energy. Every one of our Meister windows also has thermally isolated spacers between the panes of glass. That provides better insulation values, more comfort in the vicinity of the window and significantly less condensation in cold months. Heating costs can be further reduced through highly efficient triple glazing with a thickness of at least 40 mm (SuperThermo3, UltraThermo3, ThermoWhite3).

Brand advantage 4: Security

Sometimes a window's job is not just to keep out wind and rain, but also uninvited guests. That's why all UNILUX locking parts are made from high-quality materials. And each of our wood Meister windows has one mushroom cam per default. For maximum protection, we offer the SAFE line (optional with P2A laminated safety glass) and special alarm systems.

Brand advantage 5: Service

UNILUX works exclusively with our own qualified retailers. You can find them anywhere in Germany, right on site with their own local showrooms. Your regional UNILUX retailer will offer you detailed advice and assist you with your plans. They will also ensure prompt, correct installation and will be available at any time if you have any service-related needs.

Brand advantage 6: Brand quality

At UNILUX, there has always been one fast rule: Only products of uncompromising quality leave the factory. This made our company a recognized quality leader over the decades. Anyone who pays heed to the UNILUX logo can be certain of always receiving a „Made in Germany“-branded product.

ADVANTAGES OF WOOD

Masterful design for pure comfort

Wood gives a feeling of wellbeing. It's a unique material that has lasted through all fashions and trends and has always inspired craftsmen and cabinetmakers to create beautiful works of art and craftsmanship. Us, too. With a wood product from UNILUX, you're always deciding on masterful design.

You can see it if you look closely. The details make the difference. For example, the striker plates on the wood Meister window, which we recess for flush mounting. The consistent elimination of unnecessary corners and edges gives the window a charming appearance. And for the long term, too: The varnish contain special pigments that protect the wood from UV radiation. That means you'll be able to enjoy the masterful workmanship for years.

Wood as wood – Meister windows from UNILUX.

Wooden Meister windows

The facets of style

No house is like any other. A renovated house from the early industrial era and the architecture of the 21st century can lie worlds apart. That's why UNILUX Meister windows have three different basic designs right from the start: Round, slanted and rustic. Your personal style can already be seen in the window contour itself.

Round

Well-rounded: With its soft, very rounded profile, the windows of this design line fit harmoniously into timeless architecture. A classic.

Slanted

Clear edges: This design concept was developed specifically for modern architecture, attractive for its cool, no-frills lines. Futuristic and stylish.

Rustic

Eternal values: With its powerful stepped visuals, this design line evokes the handbuilt windows of yesteryear. A natural for traditional construction and original facades in older houses.

W/m²K

UNILUX Meister window slanted

Recessed striker plates

Not just visually attractive, but also – thanks to the flat surface against the screw-mounted locking parts – from a security perspective, too. Not to mention easier to clean!

Wood, pure and simple

Solid and of the highest quality. UNILUX quality can be recognized by the fact that the furniture-grade finished wood is still attractive after many years.

Mushroom pins for added security

The mushroom-shaped locking device makes break-in attempts harder. Upgradable to 4 corner locking points (SAFE package) and EN-verified Class 2 burglar resistance upon request.

Quality as a standard: the basic UNILUX advantages

You know it from buying cars: Some models seem cost-effective at first glance. But upon closer examination, you are incredulous at all the extras charged by the manufacturer.

Not with UNILUX. Our basic features in themselves are so extensive, that there is often no need for accessories. Every one of our wood Meister windows has the following standard equipment features:

Coating system

3 plus 2 equals long life for wood. UNILUX coats wood in three stages, then treats its surface in two stages. The electrostatic coating and the sanding of the surface before coating and after the prime coat ensure excellent treatment and surface quality. And – thanks to laser testing – nearly knot-free.

Thermal insulation without compromises

Every UNILUX window meets today's high standards for energy efficiency. The stable frame catches the outside temperature – reducing heating needs.

Superior-quality wood

Not all woods are the same. To guarantee a consistently high quality of materials, we use our own experienced wood buyers, even in the farthest corners of the Earth. The same strict standards are

applied during treatment – to ensure the wood has a long and healthy life.

Security

Even in standard models, every UNILUX wood Meister window has mushroom cams in its fittings, making it far harder to break into the window. All locking parts are also made from high-quality

materials, providing added security.

Multi-layered wood bonding

Stability guaranteed. Multi-layered bonding equalizes stresses between the solid-wood layers and wood surface, thereby ensuring absolute torsional rigidity.

Recessed striker plates

Impressive not only aesthetically, but also from a security perspective – due to being recessed compared to screwed-on locking parts. Not to mention easier to clean!

Extra perfect: the UNILUX optional advantages

Special circumstances require special solutions. That's why when it comes to security and thermal efficiency, UNILUX offers exclusive added value.

These additional benefits give you the certainty that your wood Meister window is top in its class. Perfection made by UNILUX.

Added security: SAFE

We offer special alarm systems and the SAFE line for maximum protection. SAFE II and SAFE III are an affordable but effective way of making burglars' lives harder. From the four-corner security in-

terlock – stable mushroom pins engage firmly into the locking parts in all four corners of a window sash – to the P4A laminated safety glass, UNILUX is ready with the right solution. For even higher standards, there is also the EN 1627ff-certified security of Resistance-Class 2.

Solar gain: ThermoWhite3

A triple-glazed insulating glass that doesn't just stop at keeping the cold out. Thanks to a new, invisible Low-e coating, you can use the energy from the sun's rays more effectively. More

solar heat finds its way into the house. At the same time, this coating – together with the argon gas filling – ensures that the heat stays inside the house.

Extra warmth: Triple glazing

Three panes instead of two. The additional layer of glass provides even better thermal insulation and therefore even lower energy costs. And since the pane itself has a thickness of 40 mm, it can also be

efficiently equipped with noise protection.

Glass competence

Every UNILUX window has double-glazed insulating glass. Even this standard version achieves insulation values that are outstanding for wooden windows. But that's not enough for our engineers and developers. For anybody who wants to get serious about thermal insulation, UNILUX also offers triple-glazed insulating glass in a number of varieties.

You have the choice: for example, SuperThermo3, in which the additional layer of glass is barely noticeable in the price. Or UltraThermo3, which uses argon/krypton gas filling to obtain sensational insulation values. Or ThermoWhite3, which not only insulates, but actively makes use of the heat from incoming sunlight.

However you decide, every UNILUX window is an example of groundbreaking glass competence.

Coating in the ThermoWhite3

The special coating lets more sun and warmth in.

Argon gas filling

The heat, however, „ricochets“ around inside and remains in the house, thanks also to the argon gas filling.

The wide choice of colors

How many different tastes are there? When it comes to woods and colors, about 560. That's the number of combination options you have for your custom UNILUX wood Meister windows. Find out which wood harmonizes best with which color or wood glaze.

You have three highly robust woods to choose from (pine, larch, eukalyptus grandis), as well as 180 covering paint colors and 9 exclusive glazing tones for outstanding UV protection.

You love wood

Wood is a living material. It's nice to be able to integrate it into one's living space. UNILUX wood Meister windows bring that liveliness into your living room.

Your world is colorful

Colors are an expression of personality and attitude towards life. Show off your taste by choosing from a range of colors that leaves nothing to be desired.

It's your choice

When it comes to wood colors, too, UNILUX always gives you the choice. Select from a wide variety of wood species, and make the most of the options for designing the wood's color scheme.

Endless variety of shapes

When choosing the shape of your wood Meister window, there are practically no limits. Triangular or round window? Sectional or semicircular arch? With or without muntins? Your specialized UNILUX trade partner will show you what's possible.

A handle on design

Design you can grab: Every UNILUX handle is not only a solid piece of workmanship „Made in Germany“, but also a visual gem. It is a tool that allows you to express your taste and style.

Shades and screens

There are different options for protection from intensive sunlight and curious eyes. Whether classical roller shutters or elegant venetian blinds, UNILUX offers you your individual shade and screen solution. By the way, we have a few good recipes against insects, too.

Venetian blinds

Blindingly bright or pitch dark? Venetian blinds give you many more nuances than that. They can control incoming light on a continuous basis. The strips, with their adjustable tilt, allow you to determine exactly how much sunlight you let into your rooms. The venetian blind also has an excellent visual appearance.

Roller shutter

When it comes to blocking out light, roller shutters have been the benchmark forever. No wonder they're preferred for use in bedrooms. And since the box appearance is the same as for our Venetian blinds, you can combine UNILUX roller shutters or our venetian blinds together harmoniously.

Insect protection

It's not just in bedrooms that insects are a bother. Biting flies and wasps can rob your enjoyment of the fresh air. So you can still air out without the worries, there are special clamping frames and rotating doors. You can easily mount these insect screens yourself. Comfort is so easy.

Every house facade is different. That's why UNILUX lets you select from different box variants when it comes to privacy protection.

For new construction we recommend plaster base variants, because roller shutters or venetian blinds are then integrated into the external stucco. There is no break in the masonry in this case – no thermal bridge, meaning less energy consumption.

Good to know: For boxes with exterior modification, you can put up wallpaper inside with no worries – the visually bothersome modification cover disappears.

Round roller shutter
Round visuals, specifically eye-catching

Plaster support variants
Behind the stucco – nearly invisible.

Variety of bars and dividers

Divided lights are the icing on the cake when it comes to a window's appearance. Our range covers four different lines, from true divided and simulated divided lites to the astragal and georgian bar designs.

Lockability

Not every window needs to be opened, especially when there are small children around. That's why most of our handles come with a lock button, and are also available as lockable variants. Just in case.

Sunshades and more

At UNILUX, we have storybook shutters, first-class roller shutters and insect screens that are either built into the roller shutter box or act as a separate component.

The reliability of a big name

UNILUX ensures award-winning long-term progress

- by selecting the right partners and raw-material suppliers, and by being a member of leading institutions and associations:

UNILUX products meet international test and safety standards:
